PREPARED FOR

Technical Director,
Roads & Urban Transportation
Egis in Ireland, Dublin

INFORMATION DATE

24 August 2026

STATUS

Public-source dossier.
Internal reconciliation required.
Not for external circulation.

EVIDENCE

Graded A / B / C throughout.
Every claim carries a source.

Contents, evidence key and the naming traps

Public sources only. Nothing is inferred into fact. Where the record is empty, that is stated rather than filled in. Thirteen live assignments: **ten carry direct public evidence**, three are publicly linked but need the current commission confirming internally.

CONTENTS

01	Executive summary What matters before Monday	3	09	Consent and delivery programme Milestones to 2033, and the risk on each	20
02	Egis at a glance Group, ownership, the four Irish entities	4	10	Funding and market context NDP, allocations, competitors	22

EVIDENCE CONFIDENCE KEY

THE THIRTEEN LIVE ASSIGNMENTS, BY EVIDENCE GRADE

Grade A - confirmed Grade C - to confirm
No live assignment rests on Grade B evidence alone.

- A Confirmed.** Named Egis, JB Barry, client or Government source.
- B Probable or legacy.** Predecessor branding, framework membership or partial evidence.
- C Market context.** Matters to the role; Egis involvement unknown or held by a competitor.

Three naming traps

Legacy branding
Most of the credentials base sits under **JB Barry & Partners**, **Barry Transportation**, **Halcrow Barry** or **CH2M Barry**, not Egis. Search all five names in any tender or notice archive.

Entity confusion
Four separate Irish legal entities trade under the Egis name. For governance and commercial reporting they are **not interchangeable**. See section 02.

Aggregator contamination
Commercial data scrapers list people against Egis Ireland who **do not work there**. One case is documented in full in section 11.

Five things to know before Monday

THIRTEEN LIVE ASSIGNMENTS

band width is proportional to count, not to contract value

The live portfolio at a glance. Thirteen assignments, ordered by how close each sits to a decision outside Egis's control. Consent-stage design dominates by count; operations dominates by contracted value and by duration.

1 · The live design portfolio is consent-stage, not construction-stage

Five of the six live capital commissions sit at TII Phase 3 or in statutory process: N/M20 Cork to Limerick, the Donegal TEN-T Priority Route, the N3 Virginia Bypass, the N72/N73 Mallow Relief Road and the R132 Drogheda active travel scheme. Luas Finglas has cleared consent, with its Railway Order operative from 13 April 2026. The immediate technical risk sits in environmental and business-case defensibility rather than in construction delivery, and the immediate commercial risk is that fee drawdown stalls at approval gates outside Egis's control.

2 · Operations is the revenue floor and the technical governance blind spot

Three live operations contracts run to the early 2030s: the Dublin Tunnel, Jack Lynch Tunnel and Motorway Operations Control Centre contract, worth up to €600 million excluding VAT over a full sixteen-year term; MMaRC Network C covering roughly 328km of the M7, M8, M9, N10, N20, N22, N24, N25, N28 and N40; and the East-Link Toll Bridge in Dublin Docklands. These sit in different legal entities from the consultancy, and the interface between operational assurance and consultancy-side technical governance is undefined in the public record. Defining it is a task for you.

3 · The credentials base is deep, but it is filed under other names

Forty-seven identifiable schemes span national roads and motorways, secondary roads, bridges, active travel, light and heavy rail, tunnels and transport planning. The great majority were delivered as JB Barry & Partners or Barry Transportation, and the per-scheme evidence lives on two unmaintained legacy websites. Those pages are the spine of every future bid and should be archived locally before the domains lapse.

4 · Egis holds all four classic consultancy roles, which most competitors cannot claim

The record evidences lead designer under the TII Project Management Guidelines, contractor's designer on design-and-build PPPs, employer's representative with PSDP and site supervision, and technical advisor through planning. Adding motorway and tunnel operations to that gives a design-plus-operate proposition that pure consultancies cannot match. Bids score on demonstrated role, not scheme name, so this should be structured as a role matrix rather than a project list.

5 · The senior transport structure was still being built when you were hired

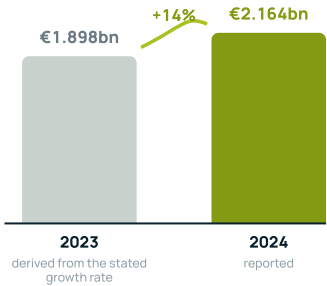

Andrew Doyle, the former Irish transport lead, left for WSP in early 2026 and no like-for-like public successor has been named. The January 2026 reorganisation put Francois Basselot in as Managing Director for UK and Ireland with Mike Birch as Transportation Director. Eamon Daly and Liam Prendiville are the senior Dublin-resident transport figures on the record. Egis was simultaneously advertising for a Director of Urban Transport in Dublin. Your remit is likely to be partly defined by you rather than handed to you.

Group, ownership and scale

French-headquartered at Guyancourt, led by chief executive Laurent Germain. Around 20,500 employees, **72 per cent of business outside France**.

GROUP PERFORMANCE, 2024

GROUP REVENUE

ALSO REPORTED FOR 2024

+75%
Net profit

record
Order backlog

72%
Outside France

Revenue of **€2.164bn** on **14 per cent growth**, net profit up 75 per cent, and an all-time-high backlog. Bars show the reported 2024 position against the prior year implied by the stated growth rate; the backlog is reported as a record but not quantified publicly.

OWNERSHIP

Tikehau Capital took control from Caisse des Dépôts in January 2022. In July 2025 it raised over €1bn through its first Egis-dedicated continuation fund, co-led by an Apollo S3 and ADIA consortium with Neuberger Berman, aiming to **double Egis in size by 2028**.

20,500

Employees worldwide

72%

Of business outside France

€2.164bn

Group revenue, 2024

+75%

Net profit movement, 2024

€1bn+

Continuation fund raised, July 2025

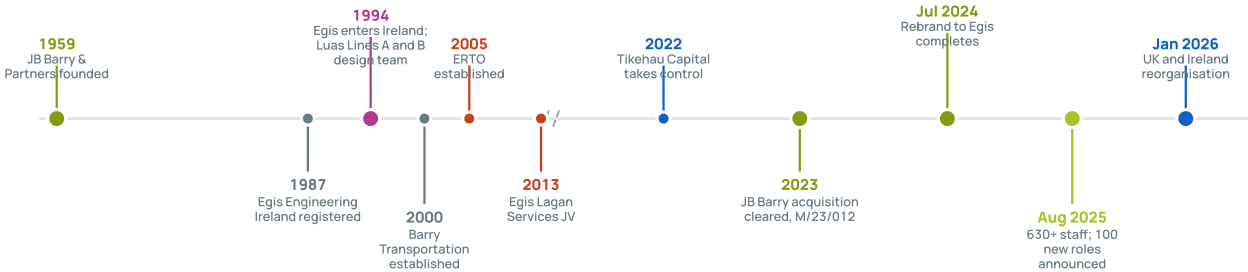

2028

Target date to double group size

Why this matters to the remit. A stated intent to double in size by 2028, funded and under private-equity ownership, is the backdrop to the 100 new Irish roles and to the unfilled senior transport posts described in section 11. Growth targets set at group level land as recruitment, bid volume and assurance load in your directorate.

Irish presence and history

Egis has operated in Ireland since 1994 and was on the design team for the original Dublin Luas Lines A and B. The transformational event was the acquisition of JB Barry & Partners, announced 21 to 22 March 2023 and cleared by the Competition and Consumer Protection Commission as case M/23/012. JB Barry, founded 1959, brought around 180 staff across four offices, together with its subsidiary Barry Transportation, established 2000 and previously trading as Halcrow Barry and CH2M Barry, which carried the roads, structures and public transport capability. The rebrand completed in July 2024. By the jobs announcement of 19 August 2025, made when Tánaiste Simon Harris opened the refurbished Classon House headquarters in Dundrum, the Irish workforce exceeded 630 across 16 offices and sites, with 100 further roles announced.

Sixty-seven years of the Irish business, 1959 to 2026. Markers above the line are corporate and ownership events; markers below are the entity formations that still determine which legal person holds each contract today.

The four Irish legal entities

Four separate legal persons trade under the Egis name in Ireland. Which one holds a contract determines professional indemnity, designer duties, CDM appointments and commercial reporting. **They are not interchangeable.**

Entity map. Boxes are legal entities; the band beneath each lists the live contracts and assignments the public record places in it. The consultancy entity is the one your technical governance principally sits over; the other three carry the operations and concession positions.

ENTITY	FUNCTION	WHY IT MATTERS TO THE TECHNICAL AUTHORITY
Egis Engineering Ireland Ltd	Consultancy and design	Formerly JB Barry & Partners, registered 1987. Headquarters at Classon House, Dundrum, Dublin 14. Around 200 engineers across four offices. The entity your technical governance principally sits over.
Egis Road & Tunnel Operation Ireland Ltd (ERTO)	Tunnel and motorway control operations	Established 2005. Dublin Tunnel, Jack Lynch Tunnel, the Motorway Operations Control Centre at East Wall Road, and the East-Link Toll Bridge. Safety-critical systems with designer interfaces.
Egis Projects Ireland Ltd (EPIR)	PPP, tolling and ITS	Established 2001, owned by Egis Projects SA. The vehicle for concession and tolling positions.
Egis Lagan Services Ltd	Motorway maintenance and renewals	Joint venture with Lagan, established 2013. Holds MMaRC Network C, roughly 328km in the south and south-east. Renewals design and standards compliance interface.

Governance note. Public records use Egis, JB Barry, Barry Transportation, Egis Lagan Services and Egis Road & Tunnel Operation Ireland interchangeably. They are not interchangeable for commercial reporting, professional indemnity, designer duties or CDM appointments. Any register you build should carry four distinct fields: **public-facing brand, legal entity, delivery business unit, and contract or framework vehicle.**

SERVICE LINES WITHIN THE REMIT

Highway and road design; bridges and structures; geotechnics; traffic and transport planning; active travel; urban transport and BusConnects-type corridors; tunnels; asset management; motorway operations and maintenance; PPP and tolling; construction supervision and contractor's designer roles; and Project Supervisor Design Process duties.

JB Barry founded; the oldest thread in the business

Where the work is

Thirteen live assignments in colour, twenty representative completed schemes as open markers. The geography is **national, not Dublin-centric**, and the operations footprint is concentrated in the south and east.

LIVE ASSIGNMENTS

- 1 N/M20 Cork to Limerick
- 2 Donegal TEN-T Priority Route
- 3 N3 Virginia Bypass
- 4 N72/N73 Mallow Relief Road
- 5 Luas Finglas
- 6 R132 Drogheda active travel
- 7 Dublin Tunnel and MOCC
- 8 Jack Lynch Tunnel, Cork
- 9 MMaRC Network C
- 10 East-Link Toll Bridge
- 11 Dún Laoghaire Living Streets
- 12 Cork Area Commuter Rail
- 13 N21 Adare Bypass

○ Completed schemes (20 of 47 plotted)

— MMaRC Network C corridors

CATEGORY

- National roads and motorways
- Active travel and urban realm
- Light rail and heavy rail
- Operations, maintenance, tolling

Reading the map

Coastline from Natural Earth 10m administrative boundaries, projected on a Lambert conformal conic with standard parallels 53.5°N and 54.5°N. Northern Ireland is shown with a dashed boundary because the Donegal TEN-T route has a cross-border interface with the A5. Scheme positions are indicative locations, not surveyed alignments.

Egis in Ireland, roads and transport assignments, August 2026. Live assignments are numbered and coloured by category; linear schemes are drawn as corridors. Open markers are completed schemes forming the credentials base, twenty of forty-seven plotted for legibility. Network C corridors are drawn from the roads named in the TII contract description.

National roads spine

The live national road commissions run down the western and northern edge of the country: Donegal TEN-T in the north-west, N3 Virginia in the midlands, and the N/M20 and N72/N73 through Cork and Limerick. **None sit in the greater Dublin area**, which is where competitor design positions are strongest.

Urban and active travel

Luas Finglas, the R132 Drogheda scheme and Dún Laoghaire Living Streets cluster on the east coast. This is the smallest part of the live portfolio and the area with the clearest competitive gap, given that the BusConnects Dublin corridor design packages sit with other firms.

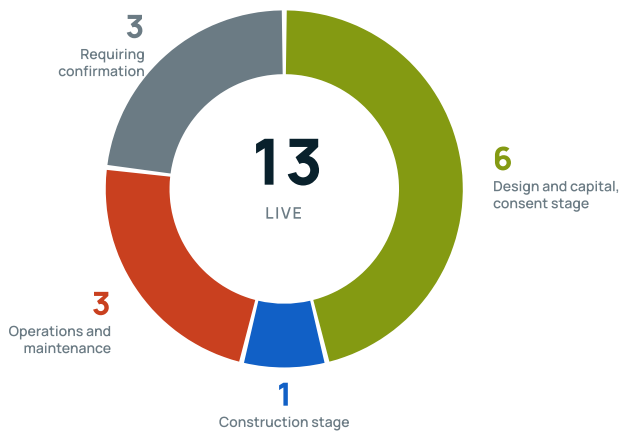

Operations footprint

Dublin Tunnel, the East-Link, the Motorway Operations Control Centre, the Jack Lynch Tunnel in Cork and MMaRC Network C across the south and south-east. Corporate material also cites approximately 470km of motorway; **reconcile that against the 328km Network C figure** before quoting either.

Composition, scale and stage

Thirteen live assignments. Design and capital work dominates by count; operations dominates by contracted value and duration. **Only three of the thirteen carry a published value**, which is the single largest gap between this dossier and the internal register.

COMPOSITION BY CATEGORY

PUBLISHED VALUE COVERAGE

PUBLISHED VALUE, BY ASSIGNMENT

3 with a published value

10 with none – the internal register is the only source

3 / 13

Live assignments with a value in the public record

16 yrs

Full term of the tunnels and MOCC contract, 8 plus 8

~€37.5m

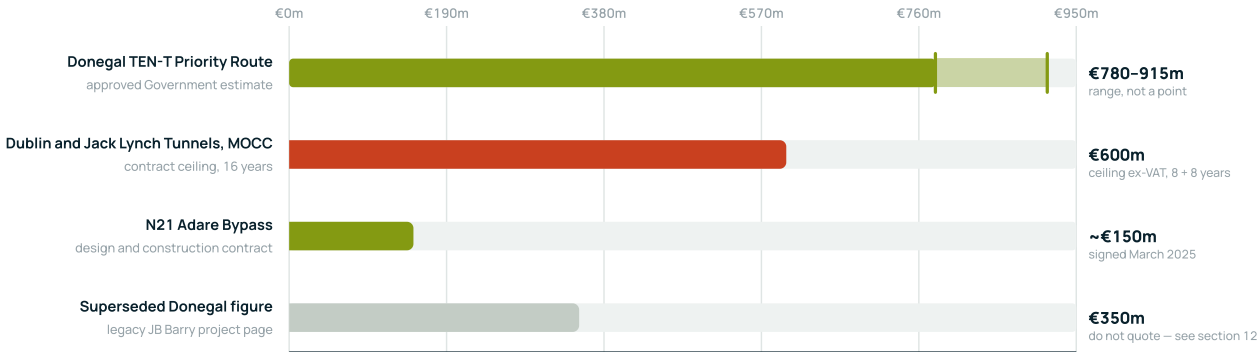

Implied average annual ceiling across the full 16 years

2033

Earliest year all three operations contracts could still be running

Thirteen live assignments by category. Design and capital work is seven of thirteen once the N21 Adare construction commission is counted with it. The three requiring-confirmation entries are carried in the register but at Grade C.

Scale of the largest schemes

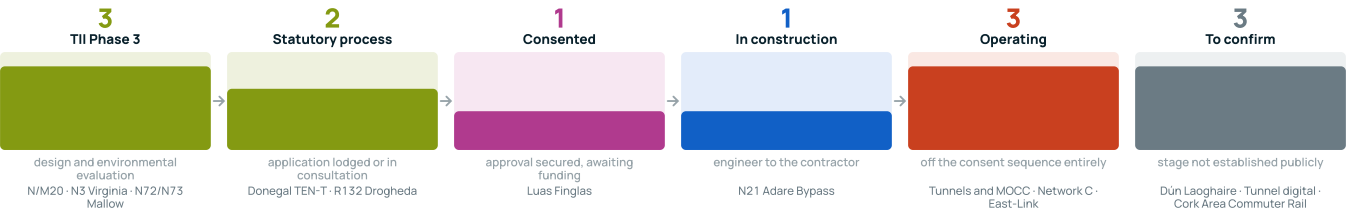

No published value: N/M20 - N3 Virginia · N72/N73 Mallow · Luas Finglas · R132 Drogheda · MMarC Network C · East-Link · Dún Laoghaire · Tunnel digital assets · Cork Area Commuter Rail

Published values only, in euro. The Donegal TEN-T bar is a range, not a point: the Government's approved estimate is €780m to €915m, superseding the €350m figure still shown on the legacy JB Barry project page. The tunnels and MOCC figure is a sixteen-year ceiling including the eight-year extension option, not a booked value, so it is not comparable with the two capital figures above and below it. The grey bar is the superseded Donegal figure, shown only so it can be recognised and rejected. Ten further live assignments have no published value at all and are named beneath the axis rather than plotted as zero.

Do not treat €600m as a booking. It is the potential value over the full sixteen-year term including the extension option. Confirm the committed value of the initial eight-year term before it appears in any board pack, bid or forecast. The same caution applies to the Donegal range: €780m to €915m is a scheme cost estimate for the client, not an Egis fee.

Stage snapshot

Where each live assignment sits in the consent and delivery sequence, and the next thing that has to happen.
Five of the six design commissions are waiting on a decision outside Egis’s control.

Distribution across the delivery sequence. Counts are of live assignments, not of value. The operations block does not sit on the consent sequence at all, which is exactly why its technical governance interface is undefined.

ASSIGNMENT		TYPE	PUBLIC STAGE	NEXT WATCHPOINT
A	N/M20 Cork to Limerick	National road, multimodal	Phase 3 design and environmental evaluation	Business case approval, then planning submission
A	Donegal TEN-T Priority Route	National road, active travel, cross-border	Statutory approval; application and CPO notices published 14 May 2026	An Coimisiún Pleanála process, possible oral hearing
A	N3 Virginia Bypass	National road, multimodal	Phase 3, with a live programme date conflict	Confirm the Q4 2027 planning programme and its cause
A	N72/N73 Mallow Relief Road	National secondary, active travel	Phase 3; approval pathway to Gate 1	Preliminary business case and Gate 1, then planning
A	Luas Finglas	Light rail	Railway Order operative from 13 April 2026	Funding gate and procurement strategy
A	R132 Drogheda active travel	Urban active travel	NTA Phase 3 approved; Phase 4 Part 8 consultation	Submissions close 1 September 2026
A	N21 Adare Bypass	National road, construction	Under construction by the Sisk Sorensen joint venture	Completion ahead of the September 2027 Ryder Cup
A	Dublin and Jack Lynch Tunnels, MOCC	Operations	Live eight-year contract, extendable by eight	Operational KPIs, renewals and resilience
A	MMaRC Network C	Maintenance and renewals	Live network operator	Asset renewals, incident trends, winter readiness
A	East-Link Toll Bridge	Toll operations	Live operator, listed by TII for the 2026 toll schedule	Contract term, performance regime, capital renewals
C	Dún Laoghaire Living Streets	Urban realm	Design credited publicly; current stage unclear	Confirm residual construction-stage scope
C	Tunnel digital asset transformation	Digital and asset management	Described publicly; phase and contract boundary unclear	Confirm whether embedded in the O&M contract
C	Cork Area Commuter Rail signalling	Heavy rail	Partner in the signalling and communications solution	Live task orders and directorate interface

A reconciliation note on the count. Section 01 describes six design and capital commissions at a consent gate; the register above carries seven design and capital rows because the N21 Adare Bypass is already in construction and is counted separately. Section 07 discusses four items requiring confirmation: the three carried in this register plus the national Disability Toll Exemption and speed-camera services, which sit outside the roads and urban transport register entirely. Both framings are correct; make sure only one of them reaches a board pack.

National roads

N/M20 Cork to Limerick

TII PHASE 3

~80km

Motorway and dual carriageway,
Blarney to Patrickswell

~100km

Active travel provision along the
corridor

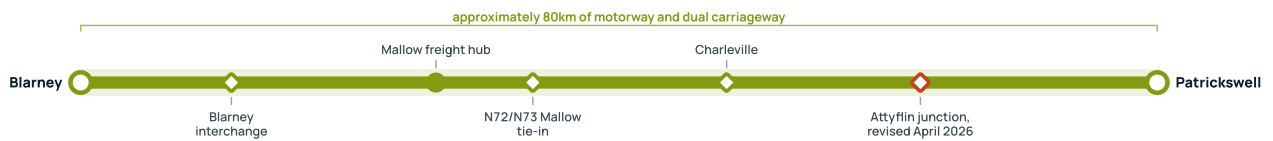

7

Transport hubs along the route

1

Dedicated freight hub, at Mallow

Client Limerick City and County Council with partner authorities and TII. **Egis role** Egis and JB Barry publicly identify involvement in planning and developing the multimodal corridor; the named lead technical advisor team is Barry Transportation with Sweco and WSP.

Corridor schematic, indicative. Approximately 80km between Blarney and Patrickswell. Diamonds are junctions and interchanges; filled markers are transport and freight hubs. Positions along the line are proportional to distance, not surveyed chainage.

A detailed project update was published in June 2025 with planning then programmed for 2026 subject to business-case approval. A revised local-link proposal at Attyflin Junction was published on 2 April 2026 following review of stakeholder concerns. No public confirmation of a full statutory planning submission had been identified by the information date.

Director watchpoint. Confirm business-case approval status, the current planning submission programme, and precisely which work packages Egis owns within the technical-adviser team. This is the largest Irish roads opportunity in the pipeline and the one where the Egis position is least clear.

Donegal TEN-T Priority Route Improvement Project

STATUTORY APPROVAL

€780–915m

Current Government cost range

3

Linked sections in one
commission

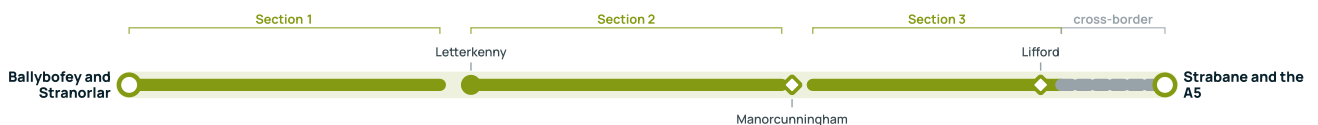

1–4

TII phases covered by the
commission

8 wks

Consultation run, including a
cross-border process

Client Donegal County Council and TII. **Egis role** JB Barry and Egis, in partnership with RPS, publicly identify a commission covering TII Phases 1 to 4, including design, environmental assessment and statutory processes.

Three linked sections, indicative. Ballybofey and Stranorlar; Letterkenny to Manorcunningham; and Manorcunningham to Lifford, Strabane and the A5 link. The A5 tie-in crosses the border, which is why the statutory process included a cross-border consultation.

Application and CPO notices were published on 14 May 2026 and the project is in the An Coimisiún Pleanála statutory approval process, with planning, EIAR and CPO documentation publicly available through the project portal. The earliest publicly stated construction start is 2028, subject to approval, funding and procurement.

Director watchpoint. Track submissions, any oral hearing, requests for further information, the decision programme, and scope or cost movement against the approved business case. This is the single largest consenting exposure in the live portfolio.

National roads and secondary routes

N3 Virginia Bypass

TII PHASE 3

~14.5km

Type 2 divided road, Derver to north of Virginia

~20km

Walking and cycling facilities

2

Park-and-share transport hubs

2 yrs

Public slippage: planning moved from 2026 to Q4 2027

Client Cavan County Council and TII, counties Cavan and Meath. **Egis role** Barry Transportation and JB Barry is the publicly named Technical Advisor to Cavan County Council, the commission covering planning and design phases. Scope also includes bus, demand-management and town-centre measures.

Corridor schematic, indicative. Approximately 14.5km of Type 2 divided road with parallel walking and cycling provision and two park-and-share hubs.

The programme movement, on the public record. The June 2025 project update expected planning the following year; a February 2026 Cavan County Council meeting report states submission is now expected in Q4 2027. Nothing in the public record explains the cause.

Director watchpoint. Obtain the approved baseline programme and establish the cause, impact and mitigation of the movement to Q4 2027. A two-year slip on a Phase 3 commission has direct fee-phasing and resource-planning consequences.

N72/N73 Mallow Relief Road

TII PHASE 3

~5km

East-west relief route, N20 to the N72/N73 corridors

1–4

TII phases in the technical advisor commission

Gate 1

Approval expected during 2026, per TII's May 2026 update

Q4 2026

Planning target identified in local reporting

Client Cork County Council and TII. **Egis role** Barry Transportation and JB Barry appointed Technical Advisor delivering engineering, environmental, economic and appraisal services through TII Phases 1 to 4. The route removes strategic HGV traffic from Mallow town centre, with active travel provision and improved conditions for vulnerable road users.

Relief route schematic, indicative. Roughly 5km connecting the N20 to the N72 and N73, drawn against the existing town-centre route it is intended to relieve.

Director watchpoint. Align the internal programme with Gate 1 and preliminary business case requirements, and confirm whether a Q4 2026 statutory submission remains achievable. Note also that the Gate 1 and TII Phase 3 vocabularies conflict in public reporting – see the register control in section 12.

Light rail, active travel and the one live construction commission

Luas Finglas

RAILWAY ORDER OPERATIVE

~3.9km

Green Line extension,
Broombridge to
Charlestown

4

New stops

2

Bridges over the Tolka

350

Park and ride spaces near
St Margaret's Road

13 Apr

Railway Order operative,
2026

Client TII with the National Transport Authority. **Egis role** Egis and JB Barry are publicly linked to the planning and detailed design of the Green Line extension, delivered with Barry Transportation and SYSTRA. Egis was also on the original 1990s Luas design team.

Line diagram, indicative. Largely grass-tracked, with cycle parking and EV charging at the park and ride. Hollow markers are new stops; the filled marker is the existing Green Line terminus the extension connects to.

Director watchpoint. Confirm the funding gate, procurement strategy, design-stage responsibilities, and the transition from planning design into delivery support. The Railway Order carries land-acquisition powers and authority to construct, operate and maintain; TII stated in March 2026 that the scheme was ready to progress once funding is secured, and no public construction contract award had been identified by the information date. **This is the clearest route from a consented design position into a delivery-phase commission.**

R132 Drogheda

PART 8

Bridge of Peace to MacBride Station. Client Louth County Council with the NTA. Egis role: JB Barry and Egis publicly identify responsibility for design, statutory approval and construction support. NTA Phase 3 approval achieved; the project is in Phase 4 Part 8 statutory planning consultation. Plans and particulars were available from 21 July to 18 August 2026, with submissions closing at 5:00 pm on Tuesday 1 September 2026.

~1.6km

Segregated cycle lanes and
footpaths, R132

~0.8km

Marsh Road (R150) provision

8

Key junctions upgraded

20%

Target rise in walking and cycling
trips within five years

This closes within days of your start. Monitor Part 8 submissions, design responses, approval timing and the transition into detailed design, procurement and construction support.

N21 Adare Bypass

UNDER CONSTRUCTION

Foynes to Limerick Phase 1A. Egis is Engineer to the Sisk Sorensen joint venture. The design and construction contract was signed in March 2025 at around €150m, with completion targeted June 2027 ahead of the Ryder Cup in September 2027. This is the only live commission in the portfolio where the deliverable is a built asset rather than a consent application.

~7km

Bypass length

~€150m

Design and construction contract
value

Jun 2027

Targeted completion

Sep 2027

Immovable external deadline

A hard, publicly visible deadline. Slippage here is reputational as well as commercial. Watch early-warning notices and design change volume.

Tunnels and the Motorway Operations Control Centre

Three publicly confirmed services, all delivered through entities separate from the consultancy, all carrying **safety-critical designer and assurance interfaces**.

€600m

Potential value excluding VAT over the full sixteen years

8 + 8

Years: live contract term plus the extension option

3rd

Successive Dublin Tunnel operating contract won by Egis

19 May

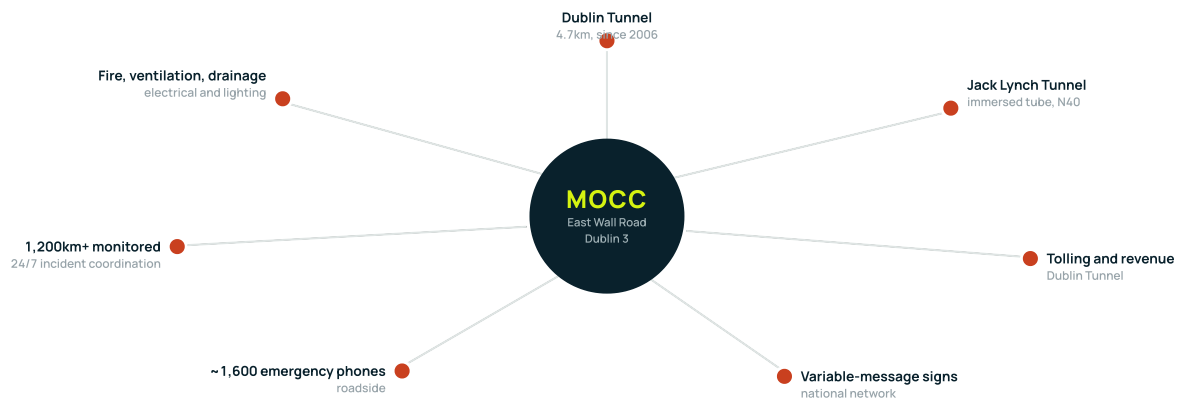

2025 announcement date, by the Minister for Transport

Client TII. **Entity** Egis Road & Tunnel Operation Ireland. **Contract** Live eight-year contract with an option for a further eight, announced 19 May 2025 and signed by Steve Preece, Pat Maher of TII and Pierre-Yves Massille of Egis Consulting & Operations.

What the contract actually covers

ONE CONTRACT, SEVEN OPERATING SCOPES

entity: Egis Road & Tunnel Operation Ireland

Scope of the tunnels and MOCC contract. The control centre at East Wall Road sits at the centre; the ring shows the assets and systems the contract places under Egis operation. Every one of them generates designer, assurance or lifecycle duties that reach the technical directorate regardless of which entity holds the contract.

Scope

Tunnel operation and routine and reactive maintenance covering fire, ventilation, electrical, drainage and lighting systems; Dublin Tunnel tolling and revenue management; and 24/7 motorway monitoring, incident coordination, variable-message signs and approximately 1,600 emergency roadside telephones. The MOCC at East Wall Road monitors more than 1,200km of motorway nationally.

Recent upgrades cited by TII

A new tolling system, SCADA replacement and LED conversion, with the 2022 Dublin Tunnel LED programme replacing 1,800 lamps and cutting light-related energy use by 60 per cent. The contract commits Egis to sourcing 100 per cent of operational energy from renewable sources from day one.

THE NUMBERS BEHIND THE SCOPE

1,200km+

Motorway monitored nationally from the MOCC

~1,600

Emergency roadside telephones

4.7km

Dublin Tunnel, open since 2006

1,800

Lamps replaced in the 2022 LED programme

60%

Cut in light-related energy use after LED conversion

100%

Renewable operational energy, from day one

Director watchpoint. Establish the technical director interface with operational assurance, asset renewals, incident learning, lifecycle investment and cross-business technical governance. Tunnel ventilation, fire and life safety, structural inspection and ITS all generate designer duties that will reach your desk regardless of which entity holds the contract.

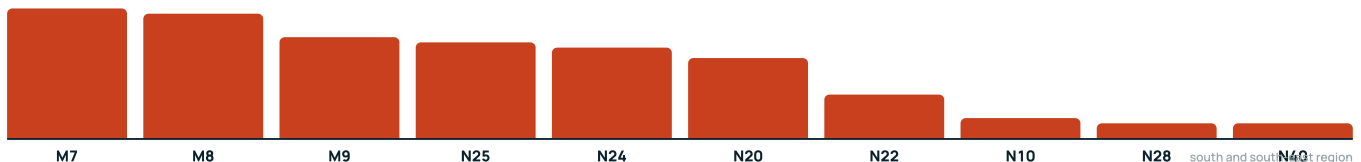

The motorway network, tolling and the footprint conflict

Motorway Maintenance and Renewals Contract, Network C

Client TII. **Entity** Egis Lagan Services, the joint venture with Lagan established 2013. **Scope** Approximately 328km in the south and south-east, one of three TII motorway operating regions. Network inspections, incident response, emergency repairs and winter maintenance; asset data, drainage, barriers, structures, rehabilitation, improvement and renewal works. TII's current road-maintenance page explicitly identifies Egis Lagan Services as the Network C manager.

THE TEN ROUTES NAMED IN THE NETWORK C DESCRIPTION

relative corridor extent · total ≈ 328km

The roads named in the Network C description. Ten routes across the south and south-east. Lengths are not published route by route, so the bars show relative corridor extent as drawn on the section 03 map, not contracted kilometres — the total is the published figure of approximately 328km.

The 470km against 328km conflict

Egis corporate

≈470km of motorway, "and all tunnels"

≈470km

TII pages

Network C, 328km

unexplained gap ≈142km

328km evidenced

Two published figures that do not reconcile. Egis corporate material refers to approximately 470km of motorways and all tunnels, while TII pages identify Network C at 328km, Dublin and Jack Lynch tunnel operations, and a separate operator for the Limerick Tunnel. The gap of roughly 142km is unexplained in the public record. Establish which definition each figure uses before either appears in a bid.

East-Link Toll Bridge, Dublin Docklands

Client TII, with the asset in the Dublin City transport network. **Entity** Egis Road & Tunnel Operation Ireland, listed by TII as the operator for the 2026 toll schedule. **Scope** Toll collection and electronic-tag interoperability, customer service and operational support for a strategic Docklands crossing, and interface with TII tolling oversight. The public source confirms the operator but does not disclose the contract term or commercial value.

Director watchpoint. Confirm contract term, asset-management obligations, performance regime, the interface with Dublin City Council and any planned capital renewals.

Also operated, per Egis corporate material

- The **M1 Dundalk toll** through Northlink Limited, majority Egis-owned, for Celtic Roads Group.
- The **national mobile speed-enforcement camera network**.
- The **national Disability Toll Exemption Scheme**.

Do not describe Egis as the operator of these. Other Irish PPP motorway concessions including the M50, M3, M4/M6, M7 and Limerick Tunnel, M8, M17/M18 and the N25 Waterford bypass are operated by other groups; the M50 is operated by Globalvia and Semperian.

Director watchpoint on Network C. Reconcile Network C asset risk, the renewal pipeline, design assurance, technical standards, incident trends and capacity against consultancy-side technical leadership. **Renewals design is where the two sides of the business meet**, and it is the most likely place for a designer-duty gap to sit undetected.

Publicly linked, current scope unclear

Egis involvement is documented in each case, but the live commission, task order or remaining scope cannot be established from public sources. **Each is a week-one question.**

	Involvement	Contracting entity	Contract term	Current phase	Commercial value
Dún Laoghaire Living Streets	established	not established	not established	not established	not established
Tunnel digital asset transformation	established	not established	not established	not established	not established
Disability Toll Exemption and speed cameras	established	not established	not established	established	not established
Rail and wider urban-transport frameworks	established	not established	not established	not established	not established

Four assignments · twenty commercial facts · four established

What the public record does and does not establish. In every case the involvement is documented; in every case the contracting detail is not. The bars show which of five commercial facts could be established from public sources for each assignment.

ASSIGNMENT	THE PUBLIC LINK TO EGIS	WHY VERIFICATION IS NEEDED	CONFIRM INTERNALLY
Dún Laoghaire Living Streets	Egis, with architects NMP, is publicly credited with redesigning the public realm and urban street system.	Public sources establish design involvement but not whether Egis retains a live construction-stage, site-support or close-out commission.	Project number and client instruction; residual scope; construction-stage technical designer duties and approvals interface; commercial status, programme and named project leadership.
Dublin and Jack Lynch Tunnel digital asset transformation	Egis describes a digital asset-management upgrade focused on real-time asset insights, trusted data and operational resilience.	The public page does not identify the delivery phase, contract boundary, or whether the work is embedded within the new O&M contract.	Current phase, deliverables and implementation roadmap; ownership of data, platforms, cyber assurance and information governance; relationship to lifecycle renewals, the MOCC and tunnel O&M obligations.
National Disability Toll Exemption and mobile speed-camera services	The Egis Ireland corporate page states that Egis operates the national disability toll-exemption scheme and nationwide mobile speed-enforcement camera systems.	The corporate summary gives no contracting entity, contract term, renewal date or service boundary.	Legal entity, client, contract start and end, extension options; operational KPIs, systems ownership, data protection and assurance responsibilities; the technical director governance interface for digital, safety and operational risk.
Rail and wider urban-transport frameworks	Egis publicly identifies Irish Rail signalling modernisation across 2,400km enabling battery-powered trains, Cork Area Commuter Rail signalling and communications over 62km, a Galway to Athenry capacity feasibility study, and a multidisciplinary consultancy framework with SYSTRA.	Framework membership does not disclose active task orders, current fees, delivery stage or the roads-and-urban-transport directorate interface.	Live task orders and work packages under the Iarnród Éireann framework; the responsibility split across rail, urban transport, systems and project-management teams; current resource commitments, key milestones and commercial exposure.

The BusConnects question. Earlier reporting associated Egis with the BusConnects Galway Dublin Road corridor detailed design. That association could not be re-confirmed against a named award notice in this pass and is therefore carried at Grade B. The BusConnects Dublin Core Bus Corridor design packages sit with Jacobs and the ROD-TYPSA team, and BusConnects Cork's Sustainable Transport Corridors consultant is Jacobs, appointed January 2024. **If Egis holds no BusConnects position, that is the clearest single gap in the urban transport portfolio and should shape the bid strategy.**

Forty-seven schemes, and the roles they evidence

Delivered largely as JB Barry & Partners, Barry Transportation, Halcrow Barry and CH2M Barry. **Bids score on demonstrated role**, so the role column matters more than the scheme name.

47

Identifiable schemes across all categories

305

Principal structures on the schemes that publish a count

~320km

Mainline road and light rail, summed from published lengths

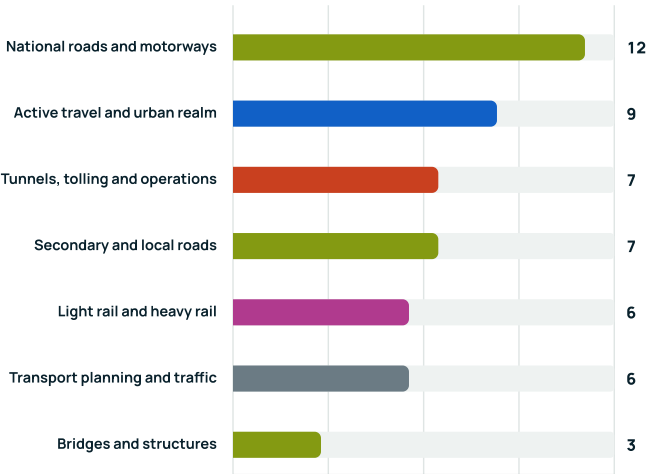

15

Counties with at least one scheme on the record

4

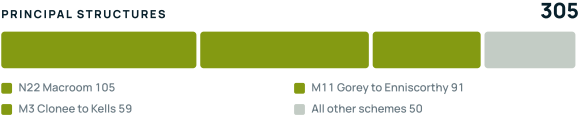

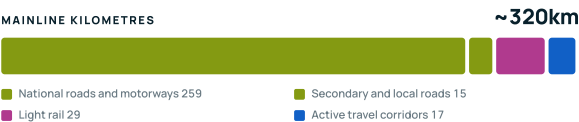

Award citations in the record, 2014 to 2024

IDENTIFIABLE SCHEMES BY CATEGORY

Counts include both live and completed work. **The concentration in national roads and active travel is the strongest bidding asset.**

DERIVED SCALE OF THE RECORD

Derived, not published as a total. Summed from the mainline lengths and structure counts stated scheme by scheme in the tables that follow. Associated roads, link roads and active travel provision are counted separately and are not included in the mainline figure. Schemes that publish no length or structure count contribute nothing, so both figures are floors.

Turn this into a role matrix, not a project list

	National roads and motorways	Secondary and local roads	Bridges and structures
Lead designer TII Project Management Guidelines	1 N22 Tralee	2 N63 · N59 Moycullen	
Contractor's designer design-and-build and PPP	5 M18/N17 · N4 · N2 · N22 · N4		1 Bohill river bridge
Employer's representative with PSDP and site supervision	1 NRA service areas	1 N56 Donegal	
Technical advisor through planning, TII Phases 1 to 4	4 N3 · N72/N73 · Donegal · N/M20		

The four consultancy roles tender panels score separately, against the categories they are evidenced in. Cells show the number of named schemes in the record that evidence that role in that category. Few Irish competitors evidence all four alongside motorway and tunnel operations.

The record evidences **lead designer** under the TII Project Management Guidelines (N63, N22 Tralee, N59 Moycullen); **contractor's designer** on design-and-build PPPs (M18/N17, N4 Lucan, N2 Finglas to Ashbourne, N22 Macroom, N4 Dromod); **employer's representative** with PSDP and site supervision (N56 Donegal, NRA service areas); and **technical advisor through planning** (N3 Virginia, N72/N73 Mallow, Donegal TEN-T). Adding motorway and tunnel operations to that gives a design-plus-operate proposition that pure consultancies cannot match.

National roads and motorways

Eleven entries, the deepest part of the record and the one that carries the structures count. **Every entry names the role, because that is what is scored.**

SCHEME	COUNTY	EGIS OR PREDECESSOR ROLE	TECHNICAL DETAIL
N22 Baile Bhuirne to Macroom	Cork	Contractor's lead designer and site design supervision, from 2019	22km Type 2 dual carriageway offline; 105 principal structures including four river bridges; 1.24m m³ site-won rock reused; push-launched ladder-deck weathering-steel Bohill bridge, first of its type and scale on an Irish national primary road. €280m, opened in stages to 6 November 2023. EPA recorded a 53.8 per cent fall in Macroom nitrogen dioxide within six months.
M3 Clonee to North of Kells PPP	Meath	Design	63km motorway plus 61 km associated roads; 59 structures (35 overbridges, 19 underpasses, three river bridges, two rail bridges) plus 39 culverts; Boyne and Blackwater crossings.
M11 Gorey to Enniscorthy PPP	Wexford	Design	27km M11 plus 4.1km N80 link and 8km N30; 91 structures including Slaney and Urrin crossings, one rail bridge, 20 overbridges, 35 underbridges, 39 culverts.
M18/N17 Gort to Tuam PPP	Galway	Contractor's designer	53.2km motorway Gort to Kilmore plus 4.2km Type 2 dual carriageway; three grade-separated junctions; two rail bridges; five river bridges.
N4 Lucan Bypass upgrade	Dublin	Contractor's designer	Roughly 6km online widening to three-lane dual with bus lanes; Newcastle Road grade separation; three new bridges. €75m, completed 2009.
N2 Finglas to Ashbourne	Dublin, Meath	Contractor's designer	Roughly 17km dual three-lane and dual two-lane; 16 bridges; two grade-separated interchanges; M50/N2 interchange upgrade; tolling facilities; 6.5km link roads.
N4 Dromod to Rooskey Bypass	Leitrim, Roscommon	Designer to Jons Civil Engineering on design and build	Bypass scheme.
N22 Tralee Bypass, Tralee to Bealagrellagh	Kerry	Main design consultant, NRA Phases 5 to 7	8km Type 2 dual carriageway plus 5.5km single carriageway access route; five roundabouts; five principal structures.
N1/M1 Northern Motorway · M7 Naas pavement improvement	Dublin, Louth · Kildare	Design	Motorway contract and pavement improvement scheme respectively.
Kirwan Roundabout, N6 Bóthar na dTreabh	Galway	Design	Five-arm roundabout, outermost orbital of eastern Galway City.
NRA service and rest areas	National	Client's representative, construction monitoring and contract administration, PPP	Shortlisted, ACEI Excellence Awards 2014.
N21 Adare Bypass, Foynes to Limerick Phase 1A	Limerick	Engineer to the Sisk Sorensen joint venture	7km bypass; design and construction contract signed March 2025; around €150m; completion targeted June 2027 ahead of the Ryder Cup. Live — see section 05.

PRINCIPAL STRUCTURES, BY SCHEME

PRINCIPAL STRUCTURES, SCHEMES THAT PUBLISH A COUNT

Three schemes carry 83 per cent of the evidenced structures count.

Where the structures count comes from. Five schemes on this page publish a structure count: N22 Macroom (105), M11 Gorey to Enniscorthy (91), M3 Clonee to Kells (59), N2 Finglas to Ashbourne (16) and M18/N17 Gort to Tuam (10 named). With N22 Tralee (5) and the secondary-road schemes overleaf, the record evidences **305 principal structures plus 78 culverts**. That is a bid-ready number, and it is nowhere stated as a total in any public source — it has to be assembled from the individual project pages, which is one more reason to archive them.

Secondary roads, bridges and structures

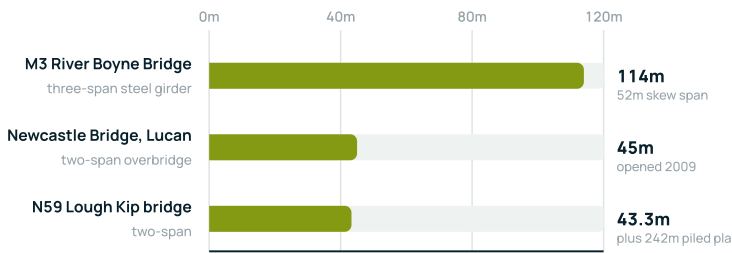

Secondary and local roads

SCHEME	ROLE	TECHNICAL DETAIL
N63 Abbeyknockmoy to Annagh Hill, Galway	NRA main design consultant, Phases 1 to 5	Two sections totalling roughly 3.2km upgraded to Type 2 single carriageway; railway bridge demolition; arch bridge extension; five structures.
N59 Moycullen Bypass, Galway	Design, Phases 5 to 7	4.3km single carriageway bypass; 11 structures including a 43.3m two-span bridge over the Lough Kip river and a 242m piled platform through deep peat; split into bypass and online improvement contracts.
N60 Castlebar to Balla (Lagnamuck), Mayo	Design	Roughly 1.4km online upgrade to Type 2 single carriageway with cycle tracks and footpaths, to DMURS and DMRB.
N56 Boyoughter to Kilkenny, Donegal	PSDP, Employer's Representative and site supervision, Phases 6 to 7	Roughly 5km realignment and widening to Type 3 single carriageway with a cycle track, following the Cloughbolie to Boyoughter scheme.
Killeen Road improvement, Dublin	Design	Roughly 1km wide single lane with off-road cycle tracks; new bridge over the Grand Canal and canal re-lining.
Clonshaugh Road improvement, Dublin	Design	Road improvement scheme.
N5 Ballaghaderreen Bypass, Roscommon	Involvement recognised by the Geoscience Ireland Award 2015	Completed bypass. B

Bridges and structures

STRUCTURE	ROLE	TECHNICAL DETAIL
M3 River Boyne Bridge, south of Navan	Design, client Meath County Council	114m three-span steel-girder integral bridge with a 52m skew span; masonry-clad piers reflecting the adjacent eighteenth-century Ballinter Bridge.
Newcastle Bridge, Lucan	Design	45m two-span overbridge carrying the R120 over the N4 Lucan Bypass; opened 2009.
Bohill river bridge, N22	Contractor's designer	Push-launched ladder-deck weathering-steel bridge, first of its type and scale carrying a national primary road in Ireland. Irish Concrete Society Infrastructure Award 2023 for the Sullane and Laney bridges; Project of the Year 2024 for the S02C arch overbridge.

SIGNATURE STRUCTURES, BY SPAN

Only three structures in the record publish a span dimension. Everything else is counted but not dimensioned, which is a gap worth closing internally before the next structures bid.

AWARDS IN THE RECORD

2014	ACEI Excellence Awards, shortlisted – NRA service and rest areas
2015	Geoscience Ireland Award – N5 Ballaghaderreen Bypass
2023	Irish Concrete Society Infrastructure Award – Sullane and Laney bridges, N22
2024	Project of the Year – S02C arch overbridge, N22

Two of the four awards are N22 Macroom structures. That scheme is doing a disproportionate amount of work in the credentials base: the largest structure count, the first push-launched weathering-steel ladder-deck on an Irish national primary road, a measured air-quality outcome, and half the award record. It should be the lead reference on any structures bid.

Active travel, cycle infrastructure and urban realm

Nine entries, spread across five local authorities and the NTA. **This is the category with the widest client base and the shallowest individual scheme values** – which is exactly the profile that framework position, rather than scheme size, decides.

9

Schemes in the active travel and urban realm category

7

Distinct clients across those nine schemes

~130km

Walking and cycling provision named across the live portfolio

20%

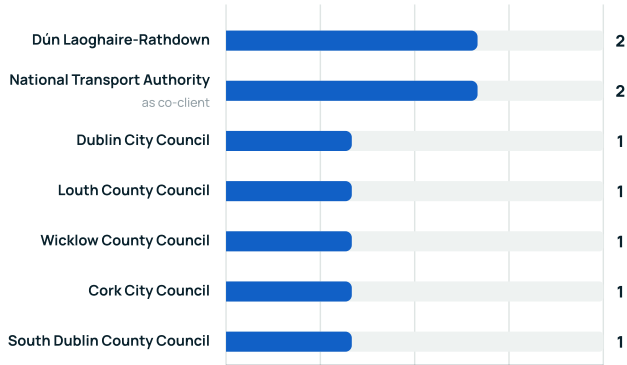

Modal-shift target on the live R132 Drogheda scheme

0

BusConnects corridor design packages on the record

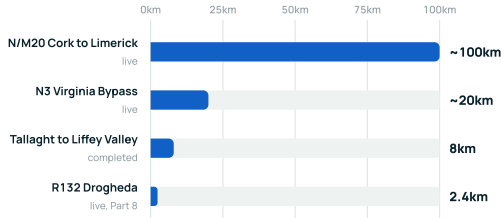

SCHEME	CLIENT	DETAIL
R132 Bridge of Peace to MacBride Station, Drogheda	Louth County Council, NTA	Live. 1.6km R132 plus 0.8km Marsh Road; eight junction upgrades; targets a 20 per cent rise in walking and cycling trips within five years. Part 8 stage.
Dún Laoghaire Living Streets	Dún Laoghaire-Rathdown	Public realm and urban street system redesign with architects NMP. Current scope to confirm.
Bray to UCD Core Bus Corridor feasibility and options study	Wicklow, Dublin	Bus priority plus cycle facilities to the GDA Cycle Network Plan and National Cycle Manual.
Cork Cycle Network	Cork City	Citywide network linking primary attraction nodes; road safety audit.
Tallaght to Liffey Valley via R113 and Clondalkin Village	South Dublin County Council	8km cycle route.
Harbour to Lidl cycle route, Greystones	Wicklow	Detailed design.
Dublin Bikes scheme	Dublin City	Cycle infrastructure.
New Vale road safety scheme, Shankill	Dún Laoghaire-Rathdown, NTA	Cyclist and pedestrian safety design.
Luas Park & Ride, Carrickmines	Dublin	Roughly 350 spaces serving the Green Line, with cycle tracks, cycle parking and bus drop-off.

ACTIVE TRAVEL CLIENTS ON THE RECORD

Client spread, not scheme value. Local authority relationships are the asset in this category. The NTA appears on two of the nine as co-client, which is the route into the national active travel programme.

WALKING AND CYCLING PROVISION, LIVE PORTFOLIO

DESIGN STANDARDS EVIDENCED

- DMURS — Design Manual for Urban Roads and Streets
- National Cycle Manual
- GDA Cycle Network Plan
- DMRB, on the rural and secondary schemes

The gap this table exposes. Every scheme here is a local authority or NTA commission. None is a BusConnects Core Bus Corridor design package, and the Bray to UCD entry is a feasibility and options study rather than a detailed design appointment. The urban transport corridor design ground in the greater Dublin area sits with competitors — see section 10.

Rail, planning, operations and the standards behind them

Light rail and heavy rail

SCHEME	CLIENT	DETAIL
Luas Finglas	TII, NTA	Live. 3.9km, four stops; Railway Order operative 13 April 2026.
Dublin Luas Lines A and B	TII predecessor	Original design team from 1994: design, engineering, procurement, testing and commissioning. 25km of track, 36 stations, Red Cow and Sandyford depots.
Cork Area Commuter Rail signalling and communications	Iarnród Éireann	Signalling and communications partner over 62km, Mallow to Cork to Cobh and Midleton; NEC4 project management office.
Irish Rail train protection system	Iarnród Éireann	Signalling and train management modernisation across 2,400km, enabling battery trains for the first time in Ireland.
Galway to Athenry capacity feasibility study	Iarnród Éireann	Rail capacity study.
DART Underground reference design	Iarnród Éireann	Highway element of the Reference Design for the Railway Order, plus traffic and utility design. Roughly 7.6km of tunnels, six stations.

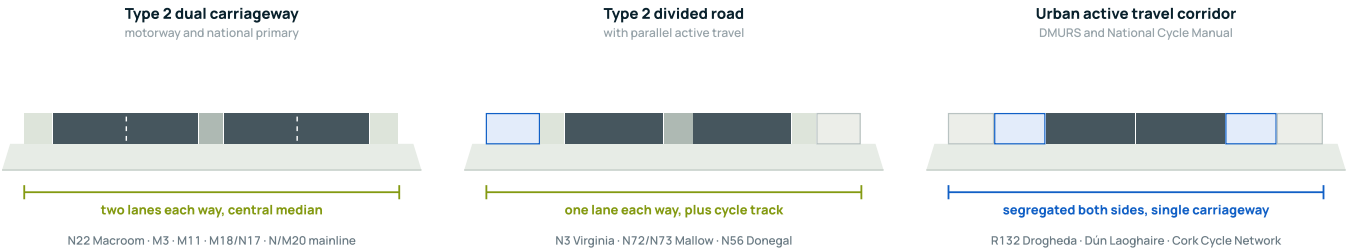

Transport planning and traffic

COMMISSION	DETAIL
N/M20 Cork to Limerick	Design and planning consultancy on the multimodal corridor.
Microsoft Ireland Dublin campus	Mobility management plan, Leopardstown.
South County Business Park and Leopardstown roundabout signalisation	PTV VISSIM micro-simulation, traffic and transport assessment, junction capacity.
Temporary traffic management	Multiple commissions for local authorities and contractors.
Bandon transport and public realm enhancement plan	Cork, with SYSTRA. B
NRA road safety audit framework	Multi-party framework Lots 1 and 2a, 2b and 2c for multidisciplinary roads consultancy.

Tunnels, tolling and operations

SERVICE	DETAIL
Dublin Tunnel	4.7km, open since 2006. Operations, maintenance and tolling.
Jack Lynch Tunnel, Cork	Immersed-tube tunnel on the N40. Operations and maintenance.
Motorway Operations Control Centre	East Wall Road, Dublin 3. Monitors more than 1,200km and roughly 1,600 emergency telephones.
MMaRC Network C	Roughly 328km, south and south-east. Egis Lagan Services.
East-Link Toll Bridge	Dublin Docklands. Listed operator for the 2026 toll schedule.
M1 Dundalk toll	Northlink Limited, majority Egis-owned, for Celtic Roads Group.
National services	Disability Toll Exemption Scheme and the mobile speed-enforcement camera network.

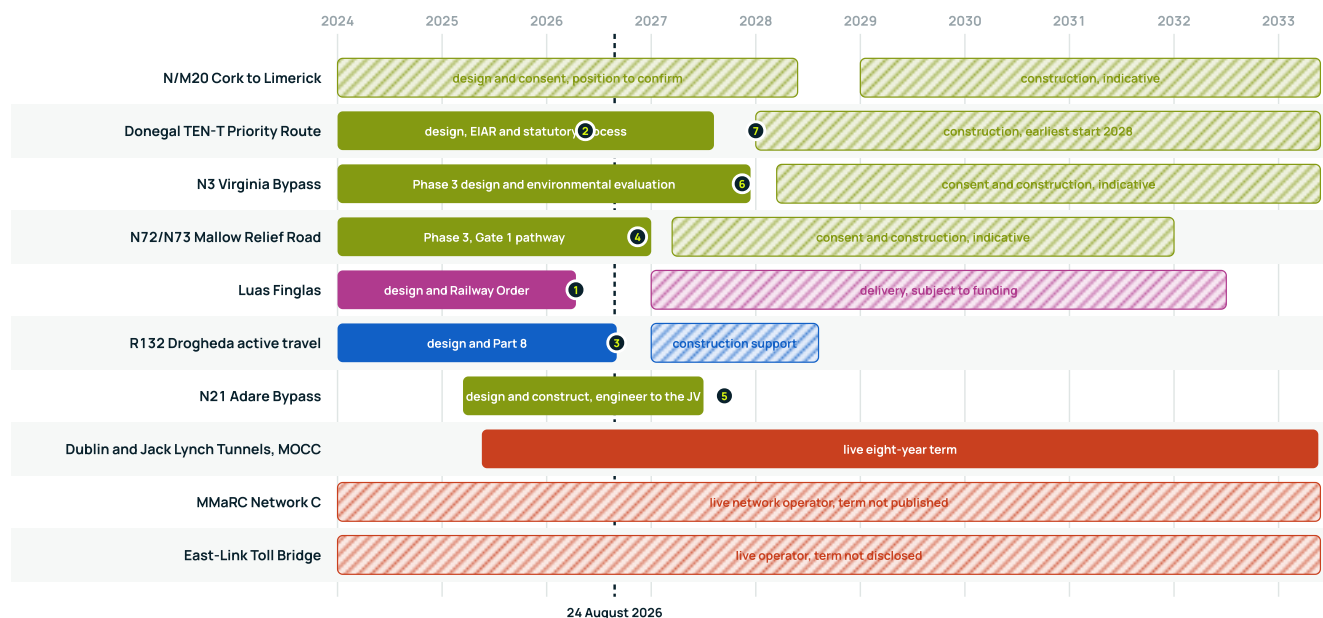

Typical cross-sections across the live portfolio

Indicative cross-sections, not to scale. The live portfolio spans three distinct cross-section families, each with different standards, safety audit implications and land-take consequences. Verify dimensions against the TII DN and DM series and the scheme departures register.

What lands, and when

Solid bars carry a confirmed Egis role; hatched bars are probable, legacy, or a duration the public record does not state. **Dates beyond a published milestone are indicative** and should be replaced with the approved internal baseline in week one.

Egis Irish roads and transport programme, 2024 to 2033. The three operations contracts provide the revenue floor to the early 2030s. Every design commission is gated by a statutory or business-case approval outside Egis's control. Numbered markers are the milestones keyed below.

MILESTONE KEY

- 1 Luas Finglas Railway Order operative, 13 April 2026
 - 2 Donegal TEN-T application and CPO notices published, 14 May 2026
 - 3 R132 Drogheda Part 8 submissions close, 1 September 2026
 - 4 N72/N73 Mallow planning target, Q4 2026
 - 5 N21 Adare completion ahead of the Ryder Cup, September 2027
 - 6 N3 Virginia planning submission, now Q4 2027
 - 7 Donegal TEN-T earliest construction start, 2028
- N/M20 business case approval gate: no date on the public record

THE THREE DATES THAT MATTER MOST

1 September 2026 · R132 Drogheda

Part 8 submissions close within days of your start. The design response sits with your team.

Q4 2026 · N72/N73 Mallow

Gate 1 and the preliminary business case determine whether the statutory submission holds. This is the nearest controllable gate.

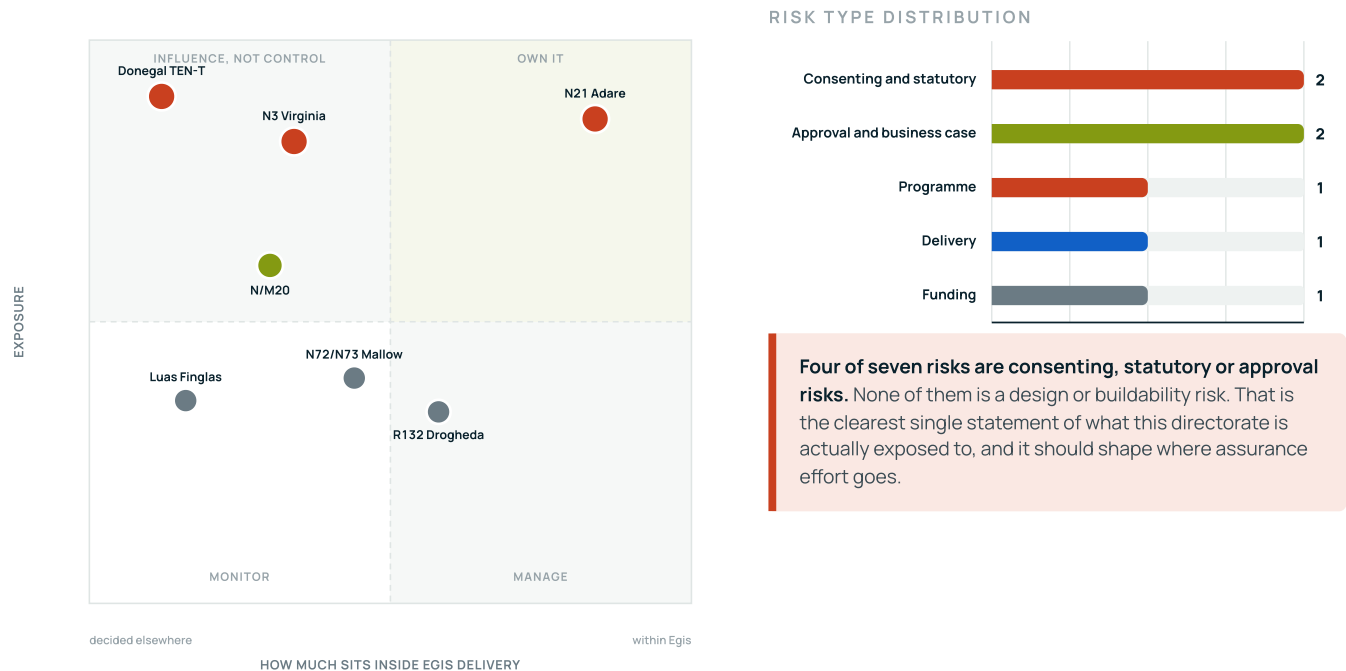

September 2027 · N21 Adare

A hard, publicly visible deadline on a live construction commission where Egis is engineer to the contractor. Slippage here is reputational as well as commercial.

Consenting risk is the dominant programme variable. The N6 Galway City Ring Road was approved in April 2026 after two decades and a 2023 High Court quashing on climate grounds. The N2 Slane Bypass was granted planning in July 2025 and is in judicial review. The N3 Virginia planning submission has moved from 2026 to Q4 2027. For a technical authority the implication is that the defensibility of environmental and climate assessment work is not a compliance formality; it is the principal determinant of whether a scheme reaches construction, and the area where an approved design is most likely to be unpicked years after sign-off.

Programme risk on the live commissions

Seven live commissions carry a named programme risk. **Three are high exposure, and only one of those is inside Egis's control.**

Exposure against control. The vertical axis is the exposure stated in the table below; the horizontal axis is how much of the outcome sits inside Egis's own delivery rather than with a consenting body, funder or client. The upper-left quadrant is where a technical authority has influence but not control, and it is where most of this portfolio sits.

COMMISSION	RISK TYPE	EXPOSURE	WHAT DRIVES IT, AND THE EARLY INDICATOR TO WATCH
Donegal TEN-T	Consenting	HIGH	Largest scheme in the portfolio, cross-border interface with the A5, and an eight-week consultation already closed. Watch for an oral hearing direction or a request for further information; either adds six to twelve months.
N3 Virginia Bypass	Programme	HIGH	Planning has already slipped from 2026 to Q4 2027 on the public record. Watch whether the approved internal baseline has been formally revised or whether the slip is unmanaged.
N21 Adare Bypass	Delivery	HIGH	Fixed external deadline ahead of the September 2027 Ryder Cup on a design-and-construct contract where Egis is engineer to the joint venture. Watch early-warning notices and design change volume.
N/M20 Cork to Limerick	Commercial	MEDIUM TO HIGH	Fee drawdown gated by business-case approval outside Egis control, within a three-firm advisor team. Watch the business case decision and any reallocation of work packages.
N72/N73 Mallow	Approval	MEDIUM	Gate 1 and preliminary business case terminology conflicts with the TII phase language in public reporting. Watch whether Gate 1 lands within 2026 as TII indicated.
R132 Drogheda	Statutory	MEDIUM	Part 8 submissions close 1 September 2026. Watch submission volume and whether material design change is required before council approval.
Luas Finglas	Funding	MEDIUM	Consent secured but no construction award identified. Watch the funding decision and the procurement route, which together determine whether Egis converts a consenting position into a delivery commission.

The money

National road funding rose **13 per cent year on year** into 2026, inside a National Development Plan that commits €275.4 billion to 2035 under a hierarchy that structurally favours the operations and renewals capability Egis already holds.

€275.4bn

National Development Plan Review 2025, to 2035

€102.4bn

Capital allocations across 2026 to 2030

€24.33bn

Department of Transport share, 2026 to 2030

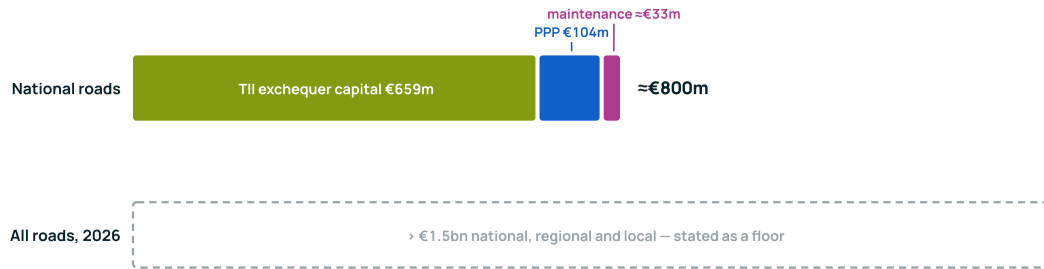

€1.5bn+

National, regional and local roads, 2026

+13%

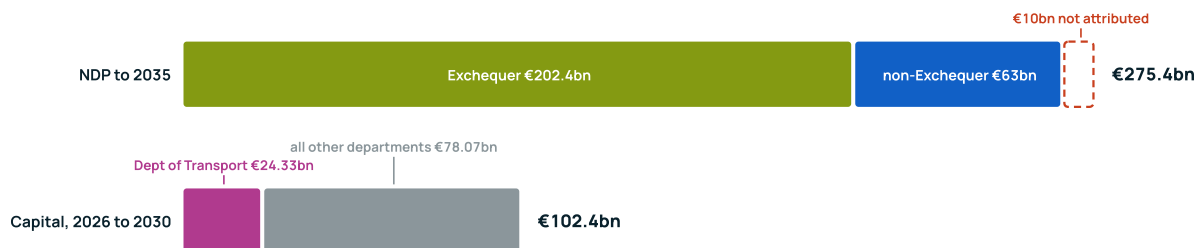

National road funding, year on year

Irish roads allocation, 2026

Within a total of over €1.5bn for national, regional and local roads, national roads take approximately €800m, of which €659m is TII exchequer capital, €104m is PPP and roughly €33m is maintenance. The dashed extent is the wider roads envelope, which is stated only as a floor.

The wider envelope

National Development Plan Review 2025, published 22 July 2025. The two components named in the summary source – €202.4bn Exchequer and €63bn non-Exchequer – sum to €265.4bn against a headline of €275.4bn. The €10bn balance is not attributed in that summary. Reconcile against the published Review before quoting any split externally; this is exactly the class of conflict section 12 is about.

The hierarchy matters more than the totals

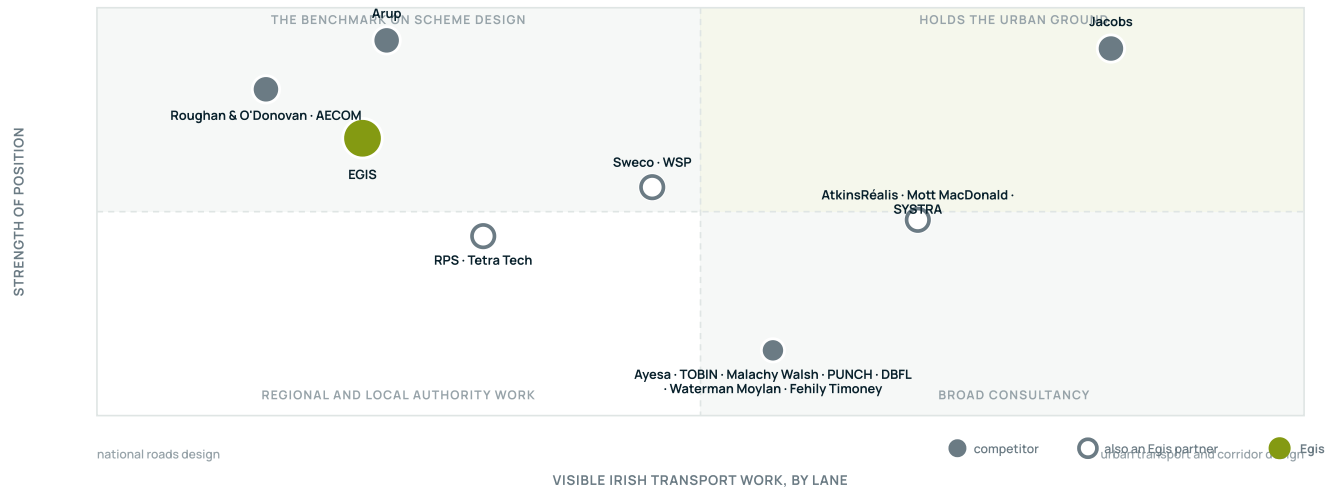

THE NIFTI PRIORITY HIERARCHY, HIGHEST PRIORITY FIRST

Egis holds a live position at every level of the hierarchy, including the two the framework funds first.

Investment is governed by the National Investment Framework for Transport in Ireland and its **Maintain, Optimise, Improve, New** hierarchy, which prioritises protecting and renewing existing assets before new build. Egis already holds motorway maintenance, tunnel operations and renewals design positions. In a policy framework that puts maintenance and optimisation ahead of new build, that is not a peripheral part of the business – **it is the part aligned with where the money is directed first.**

Who else is bidding for it

Visible Irish transport position, by lane. Horizontal position is how much of each firm's visible Irish transport work is national roads design against urban transport and corridor design; vertical position is the strength of that visible position. Firms that are Egis partners on at least one live commission are drawn hollow — several occupy both roles at once, which is the defining feature of this market.

COMPETITOR	VISIBLE IRISH TRANSPORT POSITION	IMPLICATION
Arup	Over 700 staff. Lead designer, N6 Galway City Ring Road. Galway Transport Strategy.	Dominant in major national roads design. The benchmark to displace on scheme design.
Roughan & O'Donovan, often with AECOM	N5 Westport to Turlough; recent 2026 TII consultancy awards.	The alliance winning the TII commissions Egis is not. Strongest in national road design and structures.
Jacobs	BusConnects Dublin and Cork design; client-side technical advisor on the Adare Bypass.	Holds the urban transport design ground and sits opposite Egis on Adare.
Sweco and WSP	Partners with Barry Transportation on the N/M20 technical advisor team; WSP now employs Andrew Doyle.	Partner in one lane, competitor in others, and personally entangled through the Doyle move.
RPS and Tetra Tech	Partner with JB Barry on the Donegal TEN-T commission.	Joint venture partner on the largest live consenting scheme.
AtkinsRéalis, Mott MacDonald, SYSTRA	Broad transport consultancy; Egis partners with SYSTRA on the Iarnród Éireann framework and on Luas Finglas.	Competitor in some lanes, partner in others.
Ayesa, TOBIN, Malachy Walsh, PUNCH, DBFL, Waterman Moylan, Fehily Timoney	Mid-tier Irish transport and infrastructure consultancies.	The competitive set for local authority and regional scheme work.

Where Egis is strong

- Operations and asset management
- Tunnels and intelligent transport systems
- Construction-stage designer and supervision
- Technical advisory through planning on national roads
- The combination of design plus operations, which pure consultancies cannot offer

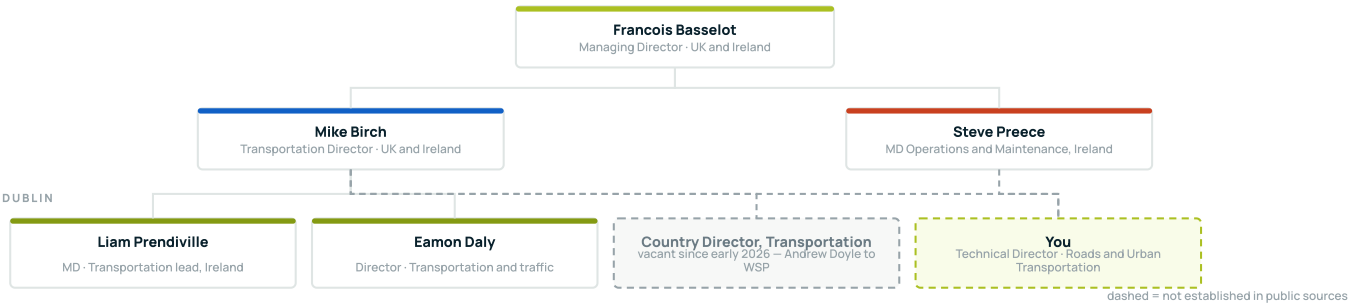

Where it is not, on the public record

- Greater Dublin urban transport corridor design, where BusConnects packages sit with competitors
- Recent TII national road detailed-design commissions, where Arup and the Roughan & O'Donovan and AECOM alliance lead

Establish in month one whether this is deliberate portfolio choice or an addressable gap.

Who is who in transportation

Drawn from company leadership and people pages, ACEI listings, Engineers Ireland material and press releases. **Professional information only.** Confidence stated for each.

The senior structure as the public record describes it, not as an organisation chart. Solid lines are relationships stated in public sources; the dashed box is the vacancy created by the Andrew Doyle departure, against which Egis was advertising through early 2026. Your own position in this structure is one of the questions in section 14.

Eamon Daly

Director · Transportation and traffic engineering

Chartered Engineer with 25 years and more in transportation and traffic. BE and MEngSc in Transportation Engineering, UCD 1995 to 1996. CEng, MIEI, FConsEI. Previously TOBIN Consulting Engineers. Appeared on the Engineers Ireland AMPLIFIED podcast discussing motorways, tunnels, Luas and MetroLink. **Your closest technical counterpart in the Irish transport team.** A

Liam Prendiville

Managing Director · Transportation lead, Ireland

35 years and more in transportation and traffic engineering. BE, Diploma in Project Management, Diploma in Highways and Geotechnical Engineering, CEng, FIEI, FConsEI. Former managing director and largest shareholder of JB Barry. N/M20 involvement. **The senior Irish-resident transport figure on the record.** A

Francois Basselot

Managing Director · UK and Ireland

In post from January 2026. Formerly head of Egis energy and sustainable cities for Europe and Africa. Over ten years in Tier 1 consultancy. The only name listed on the Egis Ireland leadership page. A

Mike Birch

Transportation Director · UK and Ireland

Announced 2026. Over 35 years. From West Yorkshire Combined Authority as Mass Transit Director on a £3bn tram programme. Previously Jacobs and Ramboll, with HS2 and Crossrail board roles. Spans light rail, heavy rail, highways and active travel. A

Steve Preece

Managing Director · Operations and Maintenance, Ireland

Also cited as CEO of Egis in Ireland. Long-standing head of Irish operations and tolling. Co-signatory of the May 2025 Dublin Tunnel contract. Leads the tunnels, MOCC, motorway monitoring and the safety camera network. A

Andrew Doyle

Departed · former Country Director, Transportation

Left for WSP as Country Director for Ireland in early 2026. Over 30 years in road and rail; previously M50 Concession and Solas. **No like-for-like public successor named.** Departure confirmed. A

Who to see, and in what order

PERSON	WHY	WHAT TO GET OUT OF IT
Liam Prendiville	Senior Irish-resident transport figure; N/M20 history; former JB Barry MD	The real reporting line, the transport pipeline, and the honest history of which legacy relationships still hold.
Eamon Daly	Director, transportation and traffic; your closest technical counterpart	Live commission status, discipline capability, resource pinch points, and where technical assurance currently sits.
Martin Hogan	Chief Business Officer; bids, clients, acquisitions	Framework positions, the win and loss log, and which pursuits need your name on them.
Steve Preece	Managing Director, Operations and Maintenance	The operations and consultancy interface, renewals design, and where designer duties currently land.
Deirdre O'Hara and Gordon Barry	Geotechnics and environment	Consenting defensibility on Donegal TEN-T, N3 Virginia and N72/N73 Mallow.
Mike Birch	Transportation Director, UK and Ireland	Where the Irish transport remit sits within the integrated structure, and what he expects of you.

The wider named team

Professional information only, from published company, ACEI and Engineers Ireland sources. Confidence stated for each. **This comes almost entirely from the legacy JB Barry people page**, which describes the firm as it stood before the July 2024 rebrand — treat it as a starting list for introductions rather than an organisation chart, and confirm each before use.

NAME	ROLE AND DISCIPLINE	CONFIDENCE	BACKGROUND
Tom Cannon	Associate Director. Project management, road design, road safety, transportation	A	30 years and more.
Peter Morehan	Traffic, transportation and road safety engineering	A	20 years. BE, CEng, MIEI.
Gabriel Dooley	Associate Director. Pavement and drainage design in transportation	A	20 years and more. Directly relevant to Network C renewals.
Tim Finn	Technical Director. Structural, water and transportation engineering	A	30 years and more.
William (Willie) Lalor	Associate Director. Structural and transportation engineering	A / B	20 years. Castlebar office; western region cover.
Maurice O'Donoghue	Structural, water and transportation engineering	A	30 years and more. BE, Eurling, CEng, FIEI, Dip PM, FConsEI.
Deirdre O'Hara	Associate Director. Geotechnics, soils and geology	A	25 years and more. IGI, EFG, CEng. The named geotechnical lead.
Garry Flood	Director. Structural engineering	A	30 years and more. Dip Eng, BSc(Eng), CEng, FConsEI.
Gordon Barry	Technical Director. Environment, EIA and dispute resolution	A	30 years and more. Chartered Engineer, Environmentalist and Scientist; arbitrator and adjudicator, FIDIC and CI Arb. Relevant to consenting defensibility.
Kieran O'Dwyer	Technical Director. Environmental consultancy, EIA and environmental management	A / B	35 years and more. BE Civil, UCD.
Anne Marie Conibear	Director and Company Secretary. Water, wastewater and flood	A	30 years and more. BE, CEng, MICE, FIEI, FConsEI.
Martin Hogan	Chief Business Officer	A	30 years and more. Chartered Fellow of RSC and CIWM. Leads Irish growth, client base and acquisitions. The person to see about bid strategy.
Erica Lund	Tenders and procurement, marketing, communications, business development	A	30 years. The operational route into bid production.
James Quinlan	Director for Luas Finglas	B	Narrated the Railway Order fly-through. Current employment status may have changed; confirm before assuming continuity on Luas Finglas.
Ulick Fitzmaurice, Ruari O'Byrne	BIM management	B	MSc Construction Informatics. The digital delivery capability you will need to assess.
Helen Bray	Chief Financial Officer, Ireland	A	Named at the May 2025 Dublin Tunnel contract event.
Bryan Harrington	Associate Director; water, wastewater and transportation background. Elsewhere cited as Director for Energy	B	Title conflicting across sources; confirm.
Joanne Moran, Marcus Fagan, Michael Hand, Ben Gaffney, Paul Judge, Ross Kinsella, Seamus Donaghy, Ger McNerney, Martin Healy	Water, environment and energy directors, several with transportation cross-skills	A / B	Context for the wider Irish directorate.

Depth, discipline coverage and where it sits

What the named list adds up to, and what it does not tell you. **The experience is deep and the discipline spread is wide; the missing thing is any published statement of who leads what.**

465+

Years of stated experience across the named individuals

17

Named individuals with a stated experience figure

10

Disciplines represented in the named list

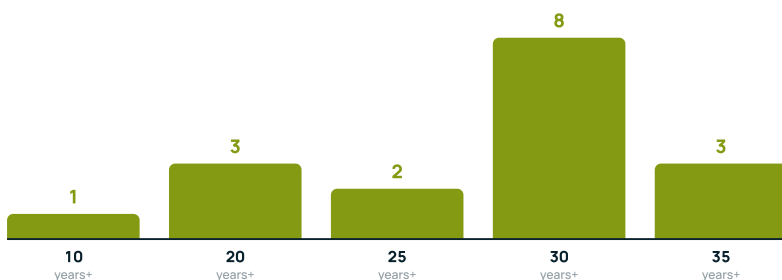

16

Offices and sites across the Irish business

0

Published discipline-lead appointments for the remit

NAMED INDIVIDUALS BY STATED EXPERIENCE

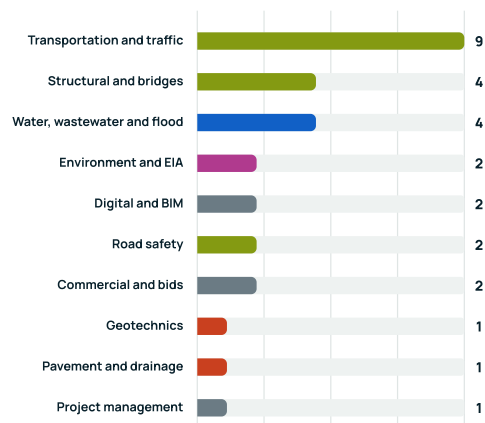

465 years of stated experience across 17 named individuals

Every figure is a floor: "30 years and more" is counted as 30.

Stated experience across seventeen named individuals. Where a source says "30 years and more", the stated figure is used, so every bar is a floor. The seventeen named people carry **at least 465 years of stated experience between them** — a number worth having in front of you before any conversation about capability.

DISCIPLINE COVERAGE IN THE NAMED LIST

Named individuals by discipline. Several appear in more than one discipline, which is why the bars sum to more than the headcount.

Where the business physically is

OFFICE FOOTPRINT, AND WHAT IS PUBLIC

16

offices and sites across Ireland
stated in the August 2025 jobs announcement

4

offices in the consultancy entity
around 200 engineers

2

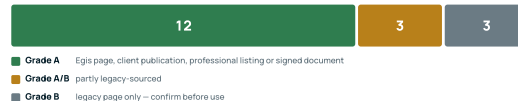

named in public sources
Classon House, Dundrum · Castlebar

14 of the 16 locations are not identified in any public source.

Sixteen offices and sites, two of them named in public sources. Classon House in Dundrum is the Dublin 14 headquarters, refurbished and opened by Tánaiste Simon Harris in August 2025; Castlebar appears through the western region cover in the named list. The remaining locations are not identified publicly, which matters for resource planning, for site supervision cover and for any claim about regional presence in a bid.

WHERE EACH NAME COMES FROM

THE EIGHTEEN TABLE ENTRIES, BY SOURCE

Grade A Egis page, client publication, professional listing or signed document
Grade A/B partly legacy-sourced
Grade B legacy page only — confirm before use

What this page cannot tell you. Depth of experience is not the same as coverage. Nothing in the public record establishes which of these people currently leads highways, structures, geotechnics, traffic, transport planning, active travel, or digital and BIM — or whether those lead roles exist at all after the rebrand and the January 2026 reorganisation.

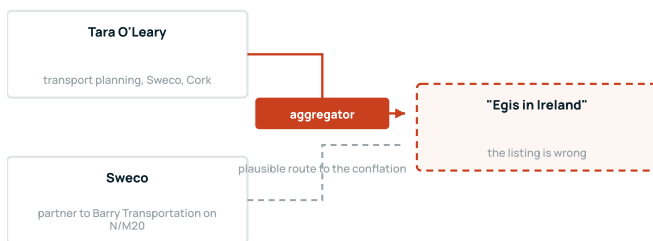

The three capability questions to close in week one. Which named discipline leads exist today, and for which disciplines. Which of the seventeen are still with the business after the rebrand. And how the roughly 200 consultancy engineers divide between transport, water, environment and energy — because the headline of 630 staff across the Irish business is not the number available to your directorate.

Two findings you should act on before you repeat any name

Finding one

No senior person named "Tara" could be confirmed at Egis in Ireland

A targeted search across Egis in Ireland, Egis Engineering Ireland, JB Barry & Partners and Barry Transportation found no senior person with the first name Tara in any transport, highways, rail, structures, planning, environment or commercial role. **This is a considered negative finding rather than an absence of searching.**

One source. No Egis-controlled page, client publication or professional listing.

How the name most likely entered the record. The aggregator listing is the only link between the person and Egis, and it is wrong.

The most likely source of the name is Tara O'Leary, a transport planning professional at Sweco, previously Fehily Timoney, Carl Bro and Grontmij, based in Cork. She is listed against "Egis in Ireland" by a commercial data-scraping aggregator, and that listing is wrong. Sweco is a partner to Barry Transportation on the N/M20 technical advisor team, which is a plausible route for the two organisations to have become conflated. A secondary possibility is confusion with Tara Street station in Dublin.

Action. Confirm with HR or with Liam Prendiville before the name appears in any internal or external document. If a Tara does work in the Irish transport team, she joined after the public record was last updated, which is entirely possible given the recruitment activity through 2026.

Finding two

The discipline-lead layer is invisible in public sources

The Egis Ireland leadership page lists only Francois Basselot. The named individuals in the table on the previous page come almost entirely from the legacy JB Barry people page and ACEI listings, which describe the firm as it was before the rebrand. **No current, published Egis Ireland organisation chart exists** for highways, structures, geotechnics, traffic, transport planning, active travel, or digital and BIM.

SENIOR TRANSPORT ROLES OPEN IN DUBLIN, EARLY 2026

Director of Urban Transport, Dublin

Director of Urban Transportation

Technical Director, MetroLink tender bid

Country Director, Transportation

unfilled after the Doyle departure

4 roles advertised · 1 senior departure · 100 new Irish roles announced

Senior transport roles Egis was recruiting for in Dublin through early 2026, against the one senior transport departure on the record.

Through early 2026 Egis was advertising for a Director of Urban Transport in Dublin, a Director of Urban Transportation, and a Technical Director to lead a MetroLink tender bid, alongside the unfilled transport country director role. Read alongside the announced creation of 100 new Irish roles, the picture is of a business building senior transport capacity faster than it is publishing it.

Two practical consequences. The internal organisation chart will be materially ahead of anything in this document, and there may be live pursuits, MetroLink among them, that intersect your remit before you have formally scoped it. Treat your first fortnight as scoping as much as induction, and expect to shape the structure rather than inherit it.

A verification protocol worth adopting on day one

Every name in this dossier is graded, and the grading matters because commercial data aggregators actively contaminate the record. A workable rule for any name that reaches a bid, a client-facing document or an organisation chart:

Confirmed

Where the person appears on an **Egis-controlled page**, a **client publication**, a **professional body listing** or a **signed document**.

Provisional

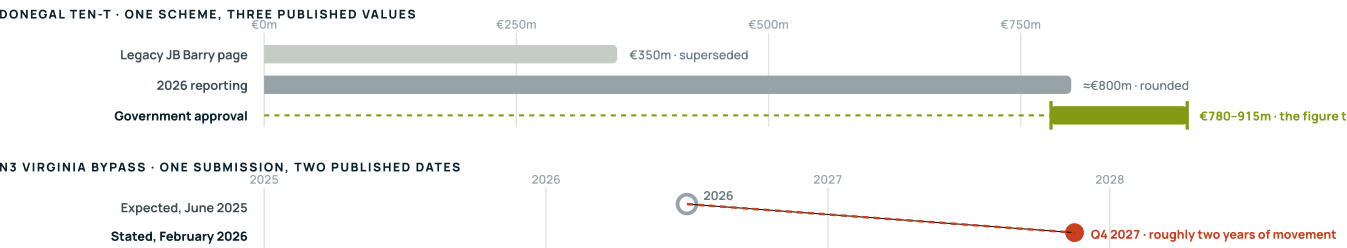

Where the source is a **legacy JB Barry or Barry Transportation page**. Correct at the time of writing, but pre-rebrand and potentially superseded.

Rejected

Where the only source is a **commercial contact-data aggregator**. The Tara O'Leary case shows these attach real people to the wrong employer.

Five flags to design out of the permanent register

Each of these caused a real conflict while assembling this dossier. **Building the control into the register now prevents the same conflict recurring every quarter.**

The value conflict and the programme conflict, drawn to scale. Both are cases where two published figures describe the same thing and do not agree. Neither can be resolved from public sources; both can be designed out of a register by storing the source and date alongside every value.

FLAG	WHAT CONFLICTS	REGISTER CONTROL
Donegal TEN-T value movement	The legacy JB Barry project page still displays €350 million, while the Government's July 2024 approval stated a current estimated range of €780 million to €915 million, and 2026 reporting commonly refers to an approximately €800 million project.	Store original published value, current approved estimate, estimate date, source and confidence as separate fields. Never overwrite a historical estimate silently.
N3 Virginia programme conflict	The June 2025 project update expected planning the following year; a February 2026 Cavan County Council meeting report states submission is now expected in Q4 2027.	Maintain baseline date, current forecast date, movement, reason, approval status and source. Flag material slippage automatically.
Road operations footprint	Egis corporate material refers to approximately 470km of motorways and all tunnels, while TII pages identify Network C at 328km, Dublin and Jack Lynch tunnel operations, and a separate operator for the Limerick Tunnel.	Map every asset to legal entity, contract vehicle, client, operating scope, start and end dates and business unit before presenting any consolidated footprint.
Mixed corporate and contracting identities	Public records use Egis, JB Barry, Barry Transportation, Halcrow Barry, CH2M Barry, Egis Lagan Services and Egis Road & Tunnel Operation Ireland. These are not interchangeable for governance or commercial reporting.	Retain four separate fields: public-facing brand, legal entity, delivery business unit, and contract or framework vehicle.
Mallow approval terminology	TII's May 2026 update says the Mallow Relief Road is expected to proceed to Gate 1 during 2026, while local reporting describes a Phase 3 design process and a possible Q4 2026 planning submission subject to preliminary business case approval.	Reconcile the Infrastructure Guidelines gate, the TII Project Management Guideline phase and the statutory planning programme in one approved milestone map.

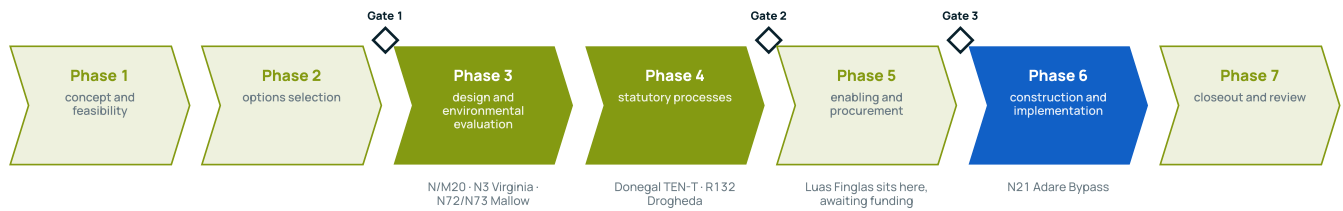

MINIMUM CONTROL FIELDS FOR A PERMANENT REGISTER

- Project or contract name and internal code
- Client, sponsor and contracting authority
- Public-facing brand, legal entity and Egis business unit
- Project director, project manager and technical lead
- TII phase, Infrastructure Guidelines gate and statutory stage
- TED or eTenders notice ID, award notice and framework or lot reference
- Baseline, current forecast and next critical milestone
- Contract value, fee, margin and remaining fee, access controlled
- Top technical, programme, commercial, stakeholder and resource risks
- Source URL, source date, last-checked date and confidence rating

Archive the legacy websites this week. The per-scheme evidence underpinning most of section 08 sits on jbbarry.ie and barrytransportation.ie. Both are unmaintained, and barrytransportation.ie now carries a disclaimer stating it is an independent information resource not affiliated with the original firm. Crawl and save every project page to a controlled drive before the domains lapse. Without those pages the credentials base becomes very difficult to evidence in a tender — and it is the source of the 305-structure and 320-kilometre figures on page 15.

What the technical authority is accountable for

The consent sequence, and where the gates sit

The TII Project Management Guidelines phases, with the Infrastructure Guidelines gates that sit alongside them. The two vocabularies are not the same thing and do not map one to one, which is the root of the Mallow terminology conflict in section 12. Diamonds are approval gates; the shaded phases are where five of the six live design commissions currently sit.

THREE CONSENT ROUTES, ALL LIVE IN THE CURRENT PORTFOLIO

An Coimisiún Pleanála road scheme approval with CPO LIVE EXAMPLE Donegal TEN-T Judicial review - oral hearing - RFI	Railway Order light rail, with land-acquisition powers LIVE EXAMPLE Luas Finglas Funding gate after consent	Part 8 local authority consent LIVE EXAMPLE R132 Drogheda Submission volume - council approval
---	---	--

Three consent routes, three different exposures. Which route a scheme takes determines who decides it, how long it takes, and what a challenge looks like. All three are live in the current portfolio.

Process and consent

- TII Project Management Guidelines, Phases 1 to 4, and the phase-gate approvals that govern them
- Infrastructure Guidelines gates, notably Gate 1 and the preliminary business case, which sit alongside but are not the same as TII phases
- TII DN design and DM standards publication series, and the scheme departures register
- Consent routes via An Coimisiún Pleanála, formerly An Bord Pleanála, including Railway Orders for light rail and compulsory purchase orders
- Part 8 local authority consent for active travel and urban realm schemes
- Environmental Impact Assessment and Appropriate Assessment obligations
- DMURS and the National Cycle Manual for urban and active travel design

Risk and duty

- Judicial review exposure on road schemes. The N6 Galway quashing and the live N2 Slane proceedings are the cautionary cases
- The Road Safety Audit regime, including the NRA and TII framework under which Egis holds a position
- Safety, Health and Welfare at Work (Construction) Regulations designer duties and Project Supervisor Design Process appointments, which Egis has held directly on the N56 Donegal scheme
- Climate Action Plan and NIFTI implications. The requirement to assess climate impact is what quashed the first N6 Galway approval
- Tunnel safety, fire and life safety, and ventilation assurance arising from the ERTO operations contracts
- Professional indemnity and designer liability across four separate legal entities

The specific assurance question this portfolio raises. Five of the six live design commissions are technical advisor or Phase 1 to 4 appointments, where the deliverable is a consent application rather than a construction design. The assurance regime for that work is different from construction-stage design assurance: the risk is not buildability but **evidentiary robustness under cross-examination**, at an oral hearing or in judicial review, potentially years after the work was signed off. Confirm in month one that the technical assurance regime distinguishes the two, and that environmental, climate and traffic modelling deliverables carry the same review rigour as structural calculations.

What to do, and what to ask

WEEK ONE

verify the map

FIRST MONTH

close the capability gap

Nine sequenced actions across the first month. The four week-one actions are ordered by how much else they unblock; the five month-one actions are ordered by how long they take to close. Only one has an external deadline that will not wait.

Week one: verify the map

- 1 Confirm the Irish roads and urban transport reporting line.** Establish who, if anyone, succeeded Andrew Doyle, how the remit divides between Mike Birch at UK and Ireland level, Liam Prendiville and Eamon Daly in Dublin, and where you sit. This blocks almost everything else.
- 2 Get the internal live project register and the win and loss log** for TII, NTA and local authority transport work over the last 24 months and reconcile it against sections 04 to 08. Expect the internal list to be longer than the public one.
- 3 Deal with the R132 Drogheda Part 8 deadline.** Submissions close 1 September 2026. Establish who owns the design response and whether resource is committed.
- 4 Archive jbbarry.ie and barrytransportation.ie** to a controlled drive. A ten-minute instruction that protects the entire credentials base.

Ten questions to ask internally

- 1** Who is my direct report, who reports to me, and how does that reconcile with Basset, Birch, Prendiville and Daly?
- 2** What is the full live roads and urban transport register, with roles, values, stages, fee positions and assurance status?
- 3** What is our standing on TII's consultant frameworks and the NTA's design panels, and which renewals are imminent?
- 4** What is our current N/M20 work-package ownership, and does it survive the business case?
- 5** Why has the N3 Virginia planning submission moved to Q4 2027, and what is the fee and resource consequence?

First month: close the capability gap

- 1 Establish the Egis position on N/M20** within the Barry Transportation, Sweco and WSP team, including which work packages Egis owns and whether that position survives the business-case gate.
- 2 Map the Egis position on every live TII and NTA framework** with lot numbers and expiry dates. Framework position determines what you are allowed to bid before capability does.
- 3 Define the operations and consultancy technical interface.** Three operations contracts run to the early 2030s in separate legal entities with no published governance link to consultancy-side technical authority. Write that interface down.
- 4 Audit designer and PSDP duty coverage** and technical assurance across live commissions, distinguishing consent-stage evidentiary assurance from construction-stage design assurance.
- 5 Resolve the greater Dublin urban transport gap.** Decide whether to invest in displacing BusConnects incumbents or to concentrate on national roads, rail and operations.

- 1** Do we hold a BusConnects position anywhere, and if not, is that deliberate?
- 2** Who are our named discipline leads for highways, structures, geotechnics, traffic, transport planning, active travel, and digital and BIM?
- 3** What is the governance interface between ERTO, Egis Lagan Services and consultancy-side technical authority, particularly for renewals design and tunnel safety?
- 4** What is our designer and PSDP duty exposure across all four Irish legal entities, and how is professional indemnity structured across them?
- 5** Is there a Tara in the Irish transport team, and if so what is her role?

Caveats to carry into every internal conversation. The register is a floor, not a ceiling — much consultancy work generates no public notice under any of the five brand names. **€600m is a ceiling, not a booking** — it is the potential value over the full sixteen-year term including the eight-year extension option; confirm the committed value of the initial eight-year term before quoting it. **Do not publish any organisation chart externally** until it is confirmed internally, and do not use the name Tara against Egis at all until HR confirms.

Where each claim comes from

Primary sources are Egis, JB Barry, client and Government publications. Trade press is secondary. **Aggregator sources are excluded** from this dossier except where explicitly flagged as unreliable in section 11.

On imagery and brand assets in this document

All graphics in this dossier were drawn from the data described in their captions. **No third-party photography is reproduced.** Project photography worth obtaining, with rights-holders, includes: the Dublin Tunnel contract signing and traffic control room (Egis Group newsroom); Luas Finglas visualisations and route map (luasfinglas.ie and TII); N22 Baile Bhuirne to Macroom (Cork National Roads Office and Jons Civil Engineering); and Donegal TEN-T scheme visualisations (donegal-ten-t.ie). Source each directly from the named rights-holder and attribute before reuse.

Brand assets in this edition are the real ones. The wordmark and symbol are the official Egis brand SVG, and the palette – lime #ABC022 and petrol #09212C – is taken from the live Egis brand system, as is the use of EB Garamond. The typeface substitutes Manrope for the licensed brand face Codec Pro, which cannot be embedded here. **Swap in Codec Pro from the internal brand portal before any onward circulation.**
